Calculation procedure

Addition

Key vocabulary: sum, total, parts and wholes, plus, add, altogether, more, 'is equal to' 'is the same as'

Starting at the larger number and counting on (augmentation)

Suggested year group(s): R, Year 1

Start with the larger number on the bead string and then count on to the smaller number 1 by 1 to find the answer.

Use cubes and Numicon too.

$$12 + 5 = 17$$

Start at the larger

number on the number line or hundred square and count on in ones or in one jump to find the answer.

A bar model which encourages the children to count on, rather than count all.

$$5 + 12 = 17$$

'Place the largest number in your head and count on the smaller number to find your answer.'

What is 5 more than 12?
What is the sum of 12 and 5?
What is the total of 5 and 12?

Addition

Key vocabulary: sum, total, parts and wholes, plus, add, altogether, more, 'is equal to' 'is the same as'

Regrouping to make 10

Suggested year group(s): Year 1, Year 2

$$6 + 5 = 11$$

Start with the larger number and use the smaller number to make 10.

$$3 + 9 =$$

Use pictures or a number line. Regroup or partition the smaller number to make 10.

$$7 + 4 = 11$$

'If I am at seven, how many more do I need to make 10? How many more do I add on now?'

Children to develop an understanding of equality e.g.

$$6 + \square = 11$$

$$6 + 5 = 5 + \square$$

$$6 + 5 = \square + 4$$

Addition

Key vocabulary: sum, total, parts and wholes, plus, add, altogether, more, 'is equal to' 'is the same as'

Column method – regrouping

Suggested year group(s): Year 2, Year 3, Year 4, Year 5, Year 6

Make both numbers on a place value grid.

Add up the ones and exchange 10 ones for one 10.

Add up the rest of the columns, exchanging the 10 counters from one column for the next place value column until every column has been added.

This can also be done with Base 10 to help children clearly see that 10 ones equal 1 ten and 10 tens equal 100.

As children move on to decimals, money and decimal place value counters can be used to support learning

Children can draw a pictorial representation of the columns and place value counters to further support their learning and understanding.

A place value chart can be used to draw the counters, circling when they make an exchange.

Year 3 upwards:

Start by partitioning the numbers before moving on to clearly show the exchange below the addition.

$$\begin{array}{r} 20 + 5 \\ 40 + 8 \\ 60 + 13 = 73 \end{array}$$

As the children move on, introduce decimals with the same number of decimal places and different. Money can be used here.

$$\begin{array}{r} 72.8 \\ + 54.6 \\ \hline 127.4 \\ 11 \end{array}$$

$$\begin{array}{r} \pounds 23.59 \\ + \pounds 7.55 \\ \hline \pounds 31.14 \\ 1 \quad 1 \quad 1 \end{array}$$

$$\begin{array}{r} 536 \\ + 85 \\ \hline 621 \\ 11 \end{array}$$

Calculation procedure

Addition

Key vocabulary: sum, total, parts and wholes, plus, add, altogether, more, 'is equal to' 'is the same as'

Conceptual variation; different ways to ask children to solve $21 + 34$

?	
21	34

Word problems:

In year 3, there are 21 children and in year 4, there are 34 children. How many children in total?

$21 + 34 = 55$. Prove it

Calculate the sum of twenty-one and thirty-four.

$$\begin{array}{r} 21 \\ +34 \\ \hline \end{array}$$

$21 + 34 =$

$$\square = 21 + 34$$

Missing digit problems:

10s	1s
10 10	1
10 10 10	?
?	5
